

## **Q11. To compare AI-generated content with student-created content and understand limitations of AI.**

**a. Write a 100–150 word paragraph on the topic:**

**“Will AI replace jobs or change them?”**

**(This must be written by the student.)**

**b. Ask any AI tool (ChatGPT/Gemini/Copilot) to write the same topic.**

**c. In your practical copy, create a Comparison Table with the headings:**

### **1. AI-Generated Content**

The screenshot shows the ChatGPT interface. On the left, there's a sidebar with various options like 'New chat', 'Search chats', 'Images', 'Apps', 'Projects', and a list of 'Your chats' including 'AI and Job Evolution'. The main area has a title 'Will AI replace jobs or change them?' followed by two paragraphs of AI-generated text. Below the text is a 'Share' button and a 'Cookie Preferences' link. At the bottom, there's a 'Ask anything' input field and a 'G' icon.

"Will AI replace jobs or change them?"

Artificial Intelligence (AI) is changing the way people work. Many people fear that AI will replace jobs, but in reality, AI will mostly change jobs rather than remove them completely. AI can do repetitive and time-consuming tasks faster and more accurately than humans, such as data entry or basic customer support. Because of this, some jobs may disappear. However, AI also creates new job opportunities in areas like AI development, data analysis, cybersecurity, and system maintenance.

AI helps workers become more productive by reducing workload and allowing them to focus on creative, critical, and human-centered tasks. For example, doctors can use AI to analyze reports, but human judgment is still necessary. To adapt, people must learn new skills and upgrade their knowledge. In conclusion, AI will not fully replace humans; instead, it will change how we work and grow in the future.

### **2. Human-Generated Content**

The screenshot shows a Microsoft Word document titled 'Whether AI will replace jobs or tra...'. The content is as follows:

Whether AI will replace jobs or transform them with new roles that generate more

Artificial Intelligence (AI) is transforming the way people work. Many people think that AI will eliminate jobs. The truth is that AI will alter jobs and will not eliminate them entirely. AI can do those jobs faster and more correctly than humans. This is true in jobs like data entry or customer support. The jobs will disappear because AI will be able to do those jobs better, but on the other hand, jobs will be created in AI development and cybersecurity.

Artificial intelligence increases the ability of employees to be more productive because it optimizes work and helps employees focus on more human-centered tasks. For instance, doctors can use artificial intelligence to refer to reports, but they will continue to use human judgment. For people to adjust, they will have to train and update their skills and knowledge. Finally, artificial intelligence will not substitute the role of humans but will reveal how we will evolve in the future.

Ln 5, Col 491 | 1,033 characters | Plain text | 130% | Windows (CRLF) | UTF-8

Aspect	AI-Generated Content	Human-Generated Content
Clarity of Language	Very clear, well-structured, and polished	Clear but slightly repetitive in places
Grammar & Accuracy	Grammatically correct with minimal errors	Minor grammatical issues and awkward phrasing
Flow & Organization	Smooth flow with logical paragraph transitions	Flow is understandable but less refined
Vocabulary Usage	Uses varied and formal vocabulary	Simpler vocabulary, more direct expression
Repetition	Avoids repetition and stays concise	Some ideas and phrases are repeated
Tone	Neutral, professional, and academic	More personal and explanatory
Sentence Structure	Balanced mix of simple and complex sentences	Mostly simple sentences
Overall Quality	High-quality, exam-ready, and polished	Good effort, but needs editing for refinement
